NEW QUESTION: 1
You have a Dynamics CRM development environment and a Dynamics CRM production environment. In both environments, your account is assigned the System Customizer security role.
In the development environment, you create a custom solution that contains all of the project components deployed to the production environment. The custom solution contains an entity.
In the development environment, you open the project solution that you intend to deploy to the production environment.
You see the entity, but not the field.
You need to ensure that you can modify the field in the development environment.
What should you do?
A. Ask the system administrator to assign your user the System Administrator security role, and then modify the system field.
B. In the project solution, add a field to the entity, and then make the modification.
C. Use the Add Sub Components action, add the field, and then make the modification.
D. In the default solution, make the modification.
Answer: D
